1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takatsuku (USPN 6,902,028).

Takatsuku teaches a power steering system with a motor driving means 77, a motor current detecting means 78, a temperature detecting means 75 and a correction means for correcting motor current output data on the basis of output from the temperature detecting means. Current output correction based on temperature is described in column 7, line 64 through column 8, line 22. Also, as seen in Figure 3, a correction factor from 109 that is, dependent on detected temperature from temperature sensor 103, is used to modify the current output value I_{m1} based on temperature.

Takatsuki is silent regarding the position of the temperature sensor relative to the motor current sensor. However, Figure 2 shows them both positioned within control apparatus 7. It would have been obvious to one of ordinary skill in the art to provide the temperature sensor and motor current detection circuit of Takatsuki proximate each other, including on the same semi-conductor in order to consolidate elements of the control apparatus. It would also have been obvious to store characteristic data on a data-rewritable non-volatile memory, in order to effectively store the data so that it may be modified as necessary.

Art Unit: 3611

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nakano, Fukumoto, Hayashi, Daido, Shimizu, Miller, and Kanda teach the use of temperature sensors in power steering controls.
